COMPLETE THESE GREEK COLUMNS

The ancient Greeks were wonderful architects. They invented three types of columns to support their buildings. Columns supported the roof, but also gave buildings a feeling of order, strength, and balance. The capital was a design at the top of the column.
(Avoid using a ruler to draw the columns)

DORIC

The Doric columns are most easily recognized by the simple circular capitals at the top of columns.

IONIC

The Ionic columns are typically identified by its capital, depicted as large paired spiral scrolls, or volutes.

CORINTHIAN

The Corinthian columns are the most decorative of the three orders. The capital is decorated with leaves and scrolls.
